

Ece Dalpolat

AI & LLM Engineer

Istanbul, Turkey | +90 552 360 9850 | ecedlplt9850@gmail.com
linkedin.com/in/ece-dalpolat | github.com/EceDalpolat | Portfolio

Profile

AI Engineer specializing in production LLM systems, multi-agent architectures, and scalable AI pipelines. At Qkare, builds and owns a multi-tenant AI platform spanning LangChain/LangGraph agent orchestration, RAG pipelines, and FastAPI microservices deployed to real enterprise clients. Strong in Python and end-to-end AI system design, from data preprocessing through production deployment and observability.

Experience

AI Engineer

Jun 2025 – Present

Qkare Istanbul

- Own the full engineering stack of a multi-tenant B2B AI platform, from data ingestion and transformation through agent deployment and production monitoring.
- Built a LangGraph multi-agent coaching platform with a 5-dimension LLM-as-judge evaluation framework and real-time voice via the OpenAI Realtime API, reducing test session turns by 49% and raising evaluation scores from 7.88 to 8.2.
- Developed a LangChain ReAct NLP agent with a 4-layer security pipeline (JWT, RLS, guardrails); built scalable FastAPI microservices with DSPy ensemble inference and an Agent API Gateway centralizing AI services.
- Shipped a cost-optimized RAG assistant (rule-based → semantic cache → RAG → LLM) using FAISS and Milvus; standardized observability with OpenTelemetry and Langfuse.

Teaching Assistant

Jan 2025 – Present

Işık University Istanbul

- Teach graduate-level data science and machine learning courses through weekly lectures and applied project sessions, covering NLP and model evaluation fundamentals.
- Evaluate student progress, design assessments, and provide technical feedback on applied ML and statistical modeling work.

Teaching Assistant & Mentor – Data Science / AI Agents Bootcamps

Jan 2025 – Present

Miuul Remote

- Support bootcamp participants with real-world case studies; mentor learners progressing from deep-learning fundamentals to building AI agents.

Graduate Research Assistant & Research Data Scientist

Jan 2024 – Jun 2025

Işık University Istanbul

- Cleaned, enriched, and engineered features from large-scale consumer behavior data; built classification models using Python and scikit-learn with swarm-intelligence-based hyperparameter optimization (PSO, ABC); used SHAP for explainability and mentored undergraduate students on ML projects.

Volunteer Software Engineer / Test Engineer

Jul 2022 – Jan 2024

Eriklabs & Aphel Istanbul

- Built data-driven web applications (Java, ASP.NET MVC, C#, SQL Server) and automated test suites (Selenium, Test-Complete) across two volunteer engagements.

Education

MSc – Information Technologies (Data Science)

Jan 2024 – Present

Işık University — GPA 3.57

Thesis: *Classification of Payment Method Preferences in Digital Payment Systems Using a Hybrid Optimization Model*

- Behavioral segmentation and preference classification on 32,267 consumer records (328 variables); optimized a Random Forest with PSO, ABC, and a custom Hybrid ABC-PSO algorithm, improving accuracy from 66.3% to 70%.
- Used SHAP-based explainability to validate model decisions. Tech stack: Python, scikit-learn, NiaPy, SHAP.

BSc – Software Engineering

Jan 2018 – Jan 2023

Kırklareli University — GPA 2.71

Skills

AI & LLM: LangChain, LangGraph, DSPy, RAG, OpenAI API, LLM-as-judge, Prompt Engineering, NLP

ML & Data: Python, scikit-learn, Model Evaluation, SHAP, Hyperparameter Optimization

Backend & Infra: FastAPI, PostgreSQL, dbt, WebSocket, JWT, RESTful API

Deployment: Docker, Kubernetes, GitLab CI/CD, OpenTelemetry, Langfuse, FAISS, Milvus

Languages: Turkish (Native) | English (B2–C1)
